State of New Hampshire Drinking Water and Groundwater Bureau Drinking Water Program Annual Report for 2007

INTRODUCTION

The 1996 Amendments to the Safe Drinking Water Act require each state to prepare an annual compliance report summarizing violations incurred by public water systems. The Annual Compliance Report is submitted to the Environmental Protection Agency (EPA) and made available to the public. The purpose of this report is to summarize the number and types of violations that public water systems receive as a result of failing to meet various requirements of the Safe Drinking Water Act.

New Hampshire's 2007 Annual Compliance Report contains an overview of New Hampshire's Drinking Water Program and a summary of regulated systems. Federal violations and their significance to various regulated monitoring programs and contaminants are discussed. Tables and charts reflect the compliance of New Hampshire's public water systems.

THE DRINKING WATER PROGRAM: AN OVERVIEW

The EPA established the Public Water System Supervision (PWSS) Program under the authority of the 1974 Safe Drinking Water Act (SDWA). Under the SDWA and the 1986 Amendments, EPA sets national limits on contaminant levels in drinking water to ensure that the water is safe for human consumption. These limits are known as Maximum Contaminant Levels (MCLs) and the Maximum Residual Disinfectant Levels (MRDLs). For some regulations, EPA establishes treatment techniques in lieu of an MCL to control unacceptable levels of contaminants in water. The Agency also regulates how often public water systems (PWSs) monitor their water for contaminants and report the monitoring results to the States or EPA. Generally, the larger the population served by a water system, the more frequent the monitoring and reporting (M/R) requirements. In addition, EPA requires PWSs to monitor for unregulated contaminants to provide data for future regulatory development. Finally, EPA requires PWSs to notify their consumers when they have violated these regulations. The 1996 Amendments to the SDWA require consumer notification to include a clear and understandable explanation of the nature of the violation, its potential adverse health effects, steps that the PWS is undertaking to correct the violation and the possibility of alternative water supplies during the violation.

The SDWA applies to the 50 states, the District of Columbia, Indian Lands, Puerto Rico, the Virgin Islands, American Samoa, Guam, and the Commonwealth of the Northern Mariana Islands.

The SDWA allows states and territories to seek EPA approval to administer their own PWSS Programs. The authority to run a PWSS Program is called primacy. For a state to receive primacy, EPA must determine that the state meets certain requirements laid out in the SDWA and the regulations, including the adoption of drinking water regulations that are at least as stringent as the

Federal regulations and a demonstration that they can enforce the program requirements. Of the 56 states and territories, all but Wyoming and the District of Columbia have primacy. The EPA Regional Offices administer the PWSS Programs within these two jurisdictions.

The 1986 SDWA Amendments gave Indian Tribes the right to apply for and receive primacy. EPA currently administers PWSS Programs on all Indian lands except the Navaho Nation, which was granted primacy in late 2000.

NH PUBLIC WATER SYSTEM PROFILE

New Hampshire defines a public water system (PWS) as a system that provides water via piping or other constructed conveyances for human consumption to at least 15 service connections or *designed to serve an average of at least 25 people* for at least 60 days each year. In accordance with NH rule, Env-Ws 301.02, the population served by a community PWS is determined by a household equivalent of 2.5 people, or 2.5 people per service connection.

There are three types of PWSs. PWSs can be community “CWS” or “C” (such as municipalities), non-transient/non-community “NTNC” or “P” (such as schools or factories), or transient/non-community “NC” or “N” (such as restaurants and campgrounds) systems. For this report, when the acronym “PWS” is used it means systems of all types unless specified in greater detail.

New Hampshire monitors approximately 2,416 PWSs. The following chart reflects an average system count over the last three years.

The PWS inventory consists of 2,416 systems, of which 721 are community “C” systems serving a population of 849,905. There are 451 non-transient/non-community “NTNC” systems and 1,244 transient/non-community “NC” systems. Most of New Hampshire’s community PWSs are very small, serving a population of less than 500. Only 129 (5.5%) of the state’s community PWSs serve a population greater than 500.

NH Public Water Systems

Community Systems by Population Ranges

Population Categories	Population Ranges	Number of Community Systems	Total Population Served
Large Systems	> 50,000	2	219,630
Medium Systems	10,001 - 50,000	17	326,300
	3,301 - 10,000	19	100,300
Small Systems	1,001 - 3,300	55	104,194
	501 - 1,000	36	26,772
	101 - 500	261	53,328
	25 - 100	321	19,226
	<25	10	155

Based on data from May, 2008.

Other NH Public Water System statistics as of May, 2008:

COMMUNITY SYSTEMS	# Systems	Population Served
Groundwater Sources (only)	651	313,595
Surface Water Sources (only)	24	304,000
Combined Sources (Surface and Ground)	15	194,160
Purchased Sources (only)	18	30,094
Purchased Sources and Groundwater Sources	13	8,056
Total Population Served by Community PWSs	721	849,905

NH has 721 community public water systems that serve approximately 849,905 people.

Given a total state population of 1,315,828 (Office of State Planning 2007 estimate), approximately 64% of the population is served by community systems.

Approximately 313,595 people, or about 24% of the state population, are served by community systems that draw “only” from groundwater.

Approximately 304,000 people, or about 23% of the population, are served by community systems that draw from surface water.

Approximately 465,923 people, or about 35% of the population, use private wells or other non-

public water systems.

All PWSs are required to comply with drinking water standards, water quality monitoring requirements, public notification requirements, and operational and construction standards. DES's Drinking Water and Groundwater Bureau (DWGB) tracks and monitors compliance with regulations, enforces the regulations, administers the permit program, provides financial assistance through the State Revolving Fund (SRF) program, conducts sanitary surveys, provides technical assistance, and trains and certifies water system operators. DWGB has also implemented a source water protection program utilizing GIS (geographic information system) data.

ANNUAL STATE PWS REPORT

Each quarter, primacy states submit data to the Safe Drinking Water Information System (SDWIS/FED), an automated database maintained by EPA. The data submitted include, but are not limited to, PWS inventory information, the incidence of Maximum Contaminant Level, Maximum Residual Disinfectant Level, monitoring, and treatment technique violations; and information on enforcement activity related to these violations. Section 1414(c)(3) of the Safe Drinking Water Act requires states to provide EPA with an annual report of violations of the primary drinking water standards. This report provides the numbers of violations in each of six categories: MCLs, MRDLs treatment techniques, variances and exemptions, significant monitoring violations, and significant consumer notification violations. The EPA Regional Offices report the information for Wyoming, the District of Columbia, and all Indian Lands but the Navaho Nation. EPA Regional offices also report Federal enforcement actions taken.

The information in this report is based on New Hampshire's drinking water database as well as SDWIS/FED. Although the two databases are mostly synchronized, there are a few discrepancies where SDWIS/FED counts unresolved violations from past years, i.e., Lead and Copper Rule (LCR) and Consumer Confidence Report Rule (CCR). These discrepancies are noted in the Appendices.

Maximum Contaminant Level (MCLs) Violations

Under the Safe Drinking Water Act (SDWA), EPA sets national limits on contaminant levels in drinking water to ensure that the water is safe for human consumption. These limits are known as Maximum Contaminant Levels (MCLs). This report includes MCL violations for microbiological contaminants under the Total Coliform Rule (TCR) and MCL violations for regulated chemical contaminants.

Maximum Residual Disinfectant Level (MRDL)

The EPA sets national limits on residual disinfectant levels in drinking water to reduce the risk of exposure to disinfectant byproducts formed, when public water systems add chemical disinfectant for either primary or residual treatment. These limits are known as Maximum Residual Disinfectant Levels (MRDLs).

Treatment Techniques (TT) Violations

For some regulations, the EPA establishes treatment techniques (TTs) in lieu of an MCL to control unacceptable levels of certain contaminants. For example, treatment techniques have been established for viruses, bacteria, and turbidity under the Surface Water Treatment Rule (SWTR). In some cases, such as the Lead and Copper Rule (LCR), once an exceedance has occurred, the PWS is required to conduct public education. Failure to do so results in a treatment technique violation.

Significant Monitoring Violations

A PWS is required to monitor and verify that the level of a contaminant, if present in the water, does not exceed the MCL. Generally the larger the population served, the more samples the PWS is required to take. If a PWS fails to have its water tested as required, then a monitoring violation occurs. For this report, significant monitoring violations are defined as any major monitoring violation that has occurred during the specified report interval. A major monitoring violation (except for the Surface Water Treatment Rule) occurs when no samples were taken or no results are reported during a compliance period. A major Surface Water Treatment Rule Monitoring/Reporting violation occurs when fewer than 90% of the required samples are taken or no results are reported during a reporting interval.

Variances and Exemptions

Variances and exemptions to specific requirements under the Safe Drinking Water Act Amendments of 1996 may be granted under certain circumstances. If, due to the characteristics of the raw water sources reasonably available, a PWS cannot meet the MCL, a primacy state can grant the PWS a variance from the applicable primary drinking water regulation, with the condition that the system install the best available technology, treatment techniques, or other means which the Administrator finds are available (taking cost into account). Currently no New Hampshire PWS has been issued a variance or an exemption.

Significant Consumer Notification Violations

Every Community Water System is required to deliver to its customers a consumer confidence report, which is a brief annual water quality report. This report is to provide information on source water, the levels of any detected contaminants, and compliance with drinking water regulations, as well as include some educational material. A community water system that completely fails to provide customers with the required annual water quality report will incur a significant consumer notification violation.

COMPLIANCE SUMMARY

A summary of public water system violations for 2007 is included in Appendix A. The information includes the number of total violations and total number of systems in violation of a particular regulated contaminant. The regulatory contaminant categories are:

**The Total Coliform Rule (TCR) or Bacteria Monitoring
Chemical Monitoring (Phase I, II, IIB, and V Rules and Radionuclides)
The Disinfectants/Disinfection Byproducts Rule (D/DBPR1)
The Lead and Copper Rule (LCR)
Surface Water Treatment Rule (SWTR)
Consumer Confidence Report Rule (CCR) Significant Public Notice**

Violations from these programs and any resulting enforcement actions are the basis of the Annual Compliance Reports and can be found in Appendices B through E. A description of these programs and the pertinent violations follow.

The Total Coliform Rule (TCR) or Bacteria Monitoring

The Total Coliform Rule (TCR), promulgated in 1989, establishes legal limits for total coliform bacteria levels in drinking water. In addition, the TCR determines the type and frequency of bacteria testing that must be conducted by each public water system.

Coliform bacteria represent a broad class of bacteria commonly found in the environment. Coliforms are considered an “indicator” organism because their presence in drinking water suggests that other disease causing organisms may be present. Disease symptoms include diarrhea, cramps, nausea, vomiting, and associated headaches and fatigue. Although total coliform bacteria are generally not harmful themselves, infants, elderly, and immuno-compromised people may be at increased risk. The presence of coliform bacteria in drinking water indicates that the source has become contaminated, the integrity of the distribution system has been compromised, or the treatment/disinfection equipment, if any, is not working properly.

If coliform bacteria are found in drinking water, the water system may need to take any number of corrective actions including flushing the system, repairing/upgrading system components, disinfecting the system, repairing treatment equipment, and enacting source protection measures.

The routine bacteria sampling regimen is determined by the classification of the system, the population served, and the physical configuration of the system. Typically, a community water system samples monthly, and a non-community system samples quarterly. A water system that has had no monitoring/reporting violations or bacterial maximum contaminant level violations for a year, serves fewer than 1,000 people, does not use full-time chlorination, has no unresolved significant deficiencies stemming from its last sanitary survey, and has no item or activity in its sanitary protective radius that could potentially contaminate the water, is eligible for a reduction in sampling frequency.

States are to report the following categories of TCR violations (SDWIS Contaminant Code 3100):

Acute MCL violation: Indicates that fecal coliform or *Escherichia coli* (“E. coli”), potentially harmful bacteria, were found to be “*Present*” in the system’s scheduled water sample, thereby violating the rule (SDWIS Violation Code 21.)

Non-acute MCL violation: Indicates that total coliform bacteria were "*Present*" in the system's scheduled samples at a frequency that violates the rule. These are indicator bacteria and are not, generally, in themselves harmful (SDWIS Violation Code 22.)

Major routine and repeat monitoring M/R violation: Indicates that a system did not submit any routine water samples during its scheduled monitoring period (SDWIS Violation Code 23) or did not submit any required repeat samples (SDWIS Violation Code 25.)

Under the TCR, whenever a water sample tests positive for total coliform bacteria, the sample must undergo further analysis to determine if fecal coliform or *E. coli* are present. Fecal coliform and *E. coli* bacteria are coliforms directly associated with fresh feces. Discovery of fecal coliform or *E. coli* will result in the immediate issuance of a "Boil Order" on the water system. The Boil Order will not be lifted until the system has been inspected to determine the source of the contamination, the necessary corrections have been made, and sufficient additional sampling has been conducted to indicate that the contamination has been eliminated. A water system will receive an "Acute MCL Violation" (SDWIS Violation Code 21) if a routine total coliform positive sample is followed by a fecal/*E. coli* positive repeat sample, or if a fecal/*E. coli* routine sample is followed by a total coliform positive repeat sample. Due to the direct threat to public health posed by the presence of fecal or *E. coli* bacteria, public notification is required as soon as possible, but no more than 24 hours after the discovery of the bacteria.

Systems that submit less than 40 samples in a sampling month are considered to comply with the TCR if no more than one sample submitted during the month is positive for total coliform. Systems submitting 40 or more samples are in compliance if no more than 5% of all samples are positive. Systems that exceed the above limits receive a "Standard MCL Violation" (SDWIS Violation Code 22) and are required to perform public notification. A total coliform positive sample requires the water system to submit repeat samples within 24 hours.

During 2007, 166 of all New Hampshire PWSs monitoring for TCR received 221 standard or acute bacteria MCL violations, as shown in the following graph. Note: A system may be counted more than once if it has both standard and acute violations.

Of the systems with such violations, 153 served 500 or fewer people.

As a general rule, a system must demonstrate at least six months of bacteria sampling results without incurring an MCL violation before DWGB will list the system as having returned to compliance. As of March 2008, 26 Community, 16 Non-Transient Non-Community, and 25 Non-Community systems with MCL violations have returned to compliance.

The TCR also provides violations for failure to submit the appropriate number of samples for bacterial analysis. Submitting none of the required routine samples results in the issuance of a “Major Routine Monitoring/Reporting Violation” (SDWIS Violation Code 23); the submission of some, but not all, of the required routine samples results in a “Minor Monitoring/Reporting Violation” (SDWIS Violation Code 24). Submitting none of the required repeat samples results in the issuance of a “Major Repeat Monitoring/Reporting Violation” (SDWIS Violation Code 25); the submission of some, but not all, of the required repeat samples results in a “Minor Repeat Monitoring/Reporting Violation” (SDWIS Violation Code 26).

During 2007, 265 water systems monitoring for TCR received 344 Major Routine or Major Repeat Monitoring/Reporting Violations. Of the systems receiving such violations, 251 served 500 or fewer people. Generally, a system receiving a Monitoring/Reporting violation must sample according to schedule for six months before it is considered to have returned to compliance. Of the systems that received Major Monitoring/Reporting Violations in 2007, 101 have returned to compliance. Community systems and NTNC systems, respectively, have had a higher rate of returning to compliance than NC systems.

Chemical Monitoring

Water quality testing for chemical contaminants is much less frequent than for microbiological contaminants. Chronic exposure over a long period is usually necessary to experience a risk to health. Chemical monitoring includes: volatile organic compounds (also known as VOCs, which are solvents and hydrocarbons), synthetic organic compounds (also known as SOCs, which are pesticides and plastics), inorganic contaminants (also known as IOCs, which are nitrate, nitrite and metals), and radionuclides (RADs). Community systems, with the exception of systems that solely

use purchased water, are required to sample for all of the above parameters under New Hampshire rules. Non-transient/non-community water systems sample for all parameters above with the exception of RADs, which are required for initial water quality testing only. Transient/non-community systems are required to sample for nitrates once a year and nitrites once every three years.

Organic Contaminants: These are carbon-based compounds, such as industrial solvents and pesticides, which include VOCs and SOCs. These contaminants generally get into water through runoff from cropland, releases from underground storage tanks, discharges from factories, or accidental spills. EPA has set legal limits on 54 organic contaminants that are to be reported [40 CFR 141.61].

Inorganic Contaminants: These are non-carbon-based compounds, such as metals, nitrates, and asbestos which generally are naturally-occurring in some water, but can also get into water through farming, chemical manufacturing, and other human activities. EPA has established MCLs for 15 inorganic contaminants [40 CFR 141.62].

Radionuclides: These are radioactive particles that can occur naturally in water or result from human activity. EPA has set legal limits on five types of radionuclides: radium-226, radium-228, gross alpha, and beta particle/photon radioactivity [40 CFR 141.15 and 141.16], and Uranium. Note that since the Uranium standard is new, compliance with this standard is not required until four quarters of samples are collected. Federal rule requires collection of these samples be completed by December 31, 2007. Violations for these contaminants are reported using the following three categories:

Gross alpha: SDWIS Contaminant Code 4000 for alpha radiation above MCL of 15 picocuries/liter (pCi/L). Gross alpha includes radium-226 but excludes radon and uranium.

Combined radium-226 and radium-228: SDWIS Contaminant Code 4010 for combined radiation from these two isotopes above MCL of 5 pCi/L.

Gross beta: SDWIS Contaminant Code 4101 for beta particle and photon radioactivity from man-made radionuclides above 4 millirem/year. This applies to systems serving populations greater than 100,000. *One New Hampshire system meets the criteria.*

Two types of Chemical monitoring violations are reported:

Maximum Contaminant Level (MCL) Violation: MCL violations occur when the sample exceeds the MCL (SDWIS Violation Code 01 for single sample; SDWIS Violation Code 02 for average).

Monitoring and Reporting (M/R) Violation: Failure to sample (SDWIS Violation Code 03).

In 2007, 85 PWSs incurred 220 MCL violations for regulated chemical contaminants. Of the 85 systems with MCL violations, four of these systems had violations for multiple contaminants.

NH tracks chemical data by six contaminant “sample” groups. These contaminant groups are used for M/R violations unless an individual IOC exceeds half the MCL, or an individual VOC or SOC is detected. When one of these situations occurs, the individual contaminant is tracked. The contaminant groups are listed in the following table:

NH Chemical Sample Groups		NH Sampling Rules
IOCs	Contains 11 regulated contaminants for community systems, and 10 for non-transient/non-community systems (excludes fluoride).	All community and non-transient/non-community systems must sample all Phase II/IIB and V IOCs every three years. State rule requires <i>non-transient/non-community</i> systems to sample for fluoride.
Nitrates	(individual)	All systems must sample annually.
Nitrites	(individual)	All systems must sample every three years.
VOCs	Contains 21 regulated contaminants	All new community and non-transient/non-community systems sample quarterly the first year, annually thereafter; or every three years with a waiver.
SOCs	Contains 25 regulated contaminants NH has received waivers for 5 of the 30 regulated SOCs based on state pesticide use records. See Appendix A. Two SOC contaminants are waived for surface water systems.	New community and non-transient/non-community systems sample annually, every three or six years with a waiver.
RADs	Contains 2 regulated contaminants. There is only one system in NH with a population greater than 100,000 and thus required to sample for man-made radionuclides.	All new community <i>and non-transient/non-community</i> systems sample quarterly, every three years thereafter.

Group Contaminant Codes	Individual Contaminants	Systems with M/R Violations	Group M/R Violations	Individual M/R Violations
VOCs		14	14	294
2964	Dichloromethane	1	-	2
2380	1,2-Dichloroethylene	1	-	1
Sub Total:		16	14	297
SOCs		13	13	323
2042	Hexachlorocyclopentadiene	1	-	1
Sub Total:		14	13	324
IOCs		2	2	20
1005	Arsenic	20	-	22
1015	Cadmium	1	-	1
1025	Fluoride	2		2
1074	Antimony	2		3
Sub Total:		25	2	48
RADs	4000	Compliance Gross Alpha	6	-
	4010	Combined Radium	8	
	Sub Total:		9	-
Nitrates	1040	41	-	41
Nitrites	1041	10	-	9
Sub Total:		11		50
TOTALS:		79	29	741

There were 741 individual chemical M/R violations incurred by 79 systems in 2007. DWGB issued 297 M/R violations to 11 CWSs and 5 NTNCs regarding failure to conduct VOC analyses. As of March 31, 2008, 171 violations have returned to compliance. Of the 301 total individual M/R violations issued to 12 CWSs and one NTNC for failure to monitor for SOC, 151 violations have returned to compliance as of March 31, 2008. Of the 27 systems receiving 50 IOC M/R violations, two of which received group IOC violations, 10 were NTNCs and 17 were CWSs. Twenty-three systems (37 total violations) had returned to compliance by March 31, 2008.

There were 41 violations issued to eleven CWSs, three NTNCs, and 27 NCs for Nitrate M/R violations. As of March 31, 2008, 28 systems have returned to compliance. Nine violations were issued to four CWS, one NTNC, and five NC systems for Nitrite M/R violations. As of March 31, 2008, six systems have returned to compliance.

New Hampshire's policy is to wait until subsequent required sampling, specifically make-up sampling, has been completed before determining that compliance has been achieved. Those systems outlined above with outstanding M/R violations have not been returned to compliance because as of March 31, 2008, they had not yet submitted all required chemical samples.

**Systems with Group Chemical Monitoring/Reporting Violations (03)
by System Type**

**Systems with Individual Chemical Monitoring/Reporting Radionuclides
Violations (03) by System Type**

**Systems with Individual Chemical Monitoring/Reporting Violations (03)
by System Type**

**Systems with Individual Chemical Monitoring/Reporting Violations (03)
by System Type (cont'd)**

The Disinfectants/Disinfection Byproducts Rule (D/DBPR Stage 1)

Under this regulation, 14 surface water systems and one consecutive system, all serving populations greater than 10,000, perform quarterly monitoring of disinfection byproducts (total trihalomethanes, TTHM and haloacetic acid, HAA5) and monthly monitoring of disinfectant residual since January 2002. All of these systems use conventional filtration and conduct monthly monitoring of total organic carbon in raw and filtered water. Beginning January 2004, an additional 26 surface water systems and 16 consecutive systems that purchase surface water with a service population below 10,000, initiated similar monitoring of disinfection byproducts and disinfectant residual. Also beginning in 2004, approximately 200 systems (including consecutive systems) that use groundwater initiated annual (third quarter) monitoring of disinfection byproducts and monthly monitoring of disinfectant residual. Of these groundwater systems, all but seven have been granted reduced monitoring status for monitoring these contaminants every three years. The remainder are on annual monitoring.

Violations for 2007 are summarized below with details included in the Appendices. In total, there were five systems (16 violations) above the TTHM MCL, and four systems (ten violations) above the HAA5 MCL. Three systems returned to compliance. There were three treatment technique (TT) violations all involving short term problems to meet filtered water turbidity requirements in surface water treatment plants. There were no violations of the Maximum Residual Disinfectant Level (MRDL) for chlorine residual. Finally, there were 13 systems (22 violations) for monitoring/reporting, nine of which have returned to compliance as of March 31, 2008.

System Type	Total Systems Monitoring	# Systems with MCL Violations	# MCL Violations (Vio Type 02)		# Systems with M/R Violations	# M/R Violations (Vio Type 27)			TT Violations (Vio Type 46)	MRDL Violations
			HAA5 (2456)	TTHM (2950)		HAA5 (2456)	TTHM (2950)	Cl-resid (0999)		
Surface water	54	6	10	16	0	0	0	0	2	0
Groundwater	195	0	0	0	13	6	6	10	0	0
Totals	249	6	10	16	13	6	6	10	2	0

*These numbers reflect violations incurred in 2007. Please see Appendix E for a complete list of violations occurring through 2007.

The Lead and Copper Rule (LCR)

This rule established national limits on lead and copper in drinking water [40 CFR 141.80-91]. Corrosion of lead and copper pipes and plumbing fixtures pose various health risks when the associated water is ingested, and can enter drinking water from household pipes and plumbing fixtures.

Lead contamination is a major concern today, especially when small children are involved. Sampling under this rule reflects this concern. The number of samples required is based on the system's population. Systems that do not exceed action levels, 0.015 mg/l for lead and 1.3 mg/l for copper, will sample each site twice the first year, once a year for the next three years, and then once every three years. Systems that exceed action levels need to do corrosion control studies, possibly provide treatment, and do additional sampling.

Community and non-transient/non-community systems are required to sample under this rule. Transient/non-community systems are exempt from the Lead and Copper Rule (LCR). States report violations of the LCR (SDWIS Contaminant Code 5000) in the following categories:

Initial lead and copper tap M/R: Indicates that a system did not meet initial lead and copper testing requirements or failed to report the results of those tests to the state; or who incurred the initial tap monitoring violation prior to the calendar year M/R but failed to return to compliance prior to January 1. Systems failing to sample by January 1 of the following year continue to incur the violation until the required samples are taken (SDWIS Violation Code 51).

Follow-up or routine lead and copper tap M/R: Indicates that a system did not meet follow-up or routine lead and copper tap testing requirements or failed to report the results. As with the previous M/R violation, systems failing to sample by January 1 of the following year continue to incur the violation until the required samples are taken (SDWIS Violation Code 52).

Treatment installation TT: SDWIS Violation Codes 58 and 62 indicate a failure to install an optimal corrosion control treatment system (58) or a source water treatment system (62) which would reduce lead and copper levels in water at the tap. (One number is to be reported for the sum of violations in these two categories.) These violations are considered treatment technique violations.

Public education violation TT: Indicates that a system did not provide required public education about reducing or avoiding lead intake from water. This violation is also considered a treatment technique violation (SDWIS Violation Code 65).

Three systems had initial monitoring and reporting violations in 2006; one system incurred a violation in 2007. All have returned to compliance in 2007.

There were 14 violations for routine or follow-up in 2007 and 13 violations were incurred in 2006. Twenty-two have currently returned to compliance. Of the two systems that failed to perform follow-up lead and copper sampling in Q3 or Q4 of 2006, one community and two non-transient non-community systems became inactive. Most of them achieved compliance within the first quarter of 2007.

In 2007, there were no new violations for failure to install corrosion control treatment. One system which incurred a violation in 2005 has not yet returned to compliance. In addition, 17 systems had 17 public notice violations. Four of these violations were incurred in 2006 and 13 in 2007. Ten

have since returned to compliance.

Surface Water Treatment Rule (SWTR)

The Surface Water Treatment Rule (SWTR) establishes standards for the treatment of surface water systems and groundwater under the direct influence of surface water. Public water systems subject to the SWTR are required to provide filtration and disinfection to achieve minimum 3 log inactivation of *Giardia lamblia* and 4 log inactivation of viruses. In addition, under the Interim Enhanced Surface Water Treatment Rule (IESWTR) and the Long Term 1 Enhanced Surface Water Treatment Rule (LT1SWTR), a total of 21 surface water systems using conventional filtration must achieve 2 log removal of *Cryptosporidium*. Monthly operating reports submitted to the DES document monitoring for turbidity and free chlorine residual at the filtration plant, and monthly monitoring to confirm positive chlorine residual in the distribution system. Turbidity standards must be met in at least 95% of measurements taken each month, and chlorine residual in water entering the distribution system must not be less than 0.2 mg/l for more than four hours. Failure to meet these or other SWTR standards results in a treatment technique violation (SDWIS Violation Codes 41, 43 and 44).

New Hampshire has 40 water systems that derive at least some of their water from surface water. Of these, one system continues to retain its filtration waiver.

The Surface Water Treatment Rule establishes criteria under which water systems supplied by surface water sources or groundwater sources under the direct influence of surface water [40 CFR 141 “Subpart H” systems] must filter and disinfect their water.

Violations of the SWTR (SDWIS Contaminant Code 0200) are reported for the following four categories:

Monitoring, routine/repeat M/R (for filtered systems): Indicates a system’s failure to carry out required water tests, or to report the results of those tests (SDWIS Violation Code 36).

Monitoring, routine/repeat M/R (for unfiltered systems): Indicates a system’s failure to carry out required water tests or to report the results of those tests (SDWIS Violation Code 31).

Treatment techniques TT (for filtered systems): Indicates a system's failure to meet filtered water turbidity requirements (SDWIS Violation Codes 41 (turbidity average) and 43 (single turbidity exceedance)).

TT Failure (for unfiltered systems): Indicates a system's failure to comply with the SWTR requirement to install filtration or meet filtration waiver conditions (SDWIS Violation Code 42).

Three community water systems received three treatment technique violations (SDWIS Violation Code 41) for 2007. One system has returned to compliance. There was one unresolved monitoring violation (SDWIS Violation Code 31) incurred in 2006 that returned to compliance in 2007.

Consumer Confidence Report Rule (CCR)

All community water systems are required to deliver to their customers a brief annual water quality report. This report is to include educational materials, and provide information on the PWS source water, the levels of any detected contaminants, and compliance with drinking water regulations. In addition, reports are to be submitted to the primacy agency. Any community system failing to complete the CCR requirements will incur the following violation:

Significant Consumer Notification Violation: Any community water system that completely fails to provide the consumer confidence report during the calendar year (SDWIS Violation Code 71; Contaminant/Rule Code 7000).

As of 2007, there were 73 community water systems with 75 Significant Consumer Notification violations. New Hampshire received interim primacy for the Consumer Confidence Rule (CCR), which gave NHDES enforcement authority for violations incurred from 2002 forward. There were nine systems with outstanding violations from 2006.

The majority of the water systems in violation for 2007 did complete their CCRs; however, some did not submit a copy to the Drinking Water and Groundwater Bureau (DWGB). When reminded to do so, 644 systems sent their CCRs to DWGB by October. Sixty-five Letters of Deficiency (LODs) were issued to the remaining systems. This process was successful because these remaining systems

finally submitted a copy of their completed CCR. Therefore, for the year 2007, New Hampshire had 99.9% compliance for CCR submittals.

Systems with CCR Violations

DWGB COMPLIANCE ASSISTANCE AND ENFORCEMENT ACTIVITIES

The DWGB uses a variety of means to assist PWSs to maintain compliance with applicable SDWA and state regulations. The compliance assistance activities include the following: making sampling schedules and analysis forms available over the internet, mailing sampling schedules to key system representatives of each PWS, mailing reminder postcards or making phone calls as the end of a monitoring period approaches, offering regular operator training courses and special topic seminars, mailing the Bureau's newsletter to approximately 4,000 stakeholders, offering fact sheets on a wide variety of subjects, and providing technical assistance over the phone and during sanitary surveys.

Should a system fail to monitor according to schedule, exceed a Maximum Contaminant Level, violate a treatment technique, fail to perform public notice, or fail to correct a significant deficiency identified in a sanitary survey, the system is issued a letter of violation. In the majority of cases, a letter of violation is likely to cause system representatives to bring their water system back into compliance. In a small number of cases, additional enforcement action is required. If the violation is relatively minor, a Letter of Deficiency (LOD) is issued. The LOD requests that certain actions be completed within specified time periods. The LOD seeks voluntary compliance from the system owners, and it is not enforceable. More serious violations or repetitive violations result in the issuance of an Administrative Order and/or the imposition of Administrative Fines. On rare occasions, it has been necessary to refer a water system to the NH Attorney General's office for civil and/or criminal penalties.

Of note is a new enforcement strategy that has been implemented in 2002. Because NH rules specify that sampling be conducted in the quarter specified in the master sampling schedule, Notice of Violation (NOV) letters are sent out as soon as each quarter is complete. Systems that fail to sample during the assigned quarter are sent the NOV letter and make-up sampling is required as soon as possible. This provides for a more equitable enforcement response to all systems, regardless of quarter assigned, promotes compliance by establishing DES' oversight capabilities, and allows DES

to better balance the processing of enforcement actions throughout the year.

The New Hampshire Drinking Water Program is very comprehensive. The various sections work closely with one another, and all utilize the same database. The Monitoring and Enforcement Section, as well as sanitary surveys and the Certified Operator program, have enhanced compliance in New Hampshire by providing additional outreach efforts.

Sanitary Surveys

DES staff conduct sanitary surveys, or water system inspections, every three years for Community and NTNC systems, and every five years for NC systems. The water systems are inspected for compliance with drinking water program regulations. Any necessary water quality samples can also be taken during the survey. Surveys are one of the best ways of ensuring proper protection of drinking water supplies and the proper operation of public water systems. In addition, periodic visits to the water systems allow the DES staff to update its data and gather other information on the water systems that is required under federal and state regulation. All new systems are surveyed as they come on line. DES staff conducted 571 sanitary surveys in 2007. In addition, there were 190 site visits including 44 site investigations, 65 technical visits, and 58 site visits for other reasons. There were also 23 visits related to capacity development.

Systems with Sanitary Surveys

New Hampshire Drinking Water Operator Certification Program

The State of New Hampshire requires that all community and non-transient/non-community public water systems have a certified operator. These operators oversee many system operations to ensure a safe and adequate water supply to the system's customers. There are two categories of certification: treatment and distribution, and each category is divided into five levels of complexity. Each level has its own strict experience and education requirements, and applicants must pass a certification exam with a grade of at least 70% to become certified. DES sponsors classes and seminars, and requires certified operators to maintain CEUs (continued education units). As of December 31, 2007, New Hampshire has 913 active certified operators.

CONCLUSIONS

In general, New Hampshire tends to have a higher number of MCL occurrences than other states. Unlike most other states and territories, New Hampshire has an Administrative Rule, Env-Ws 322.11, which requires the owner of a PWS to enter into a written agreement with a certified laboratory to perform duties related to reporting drinking water quality analyses. The agreement must contain the provision that the lab reports all analytical results directly to DWGB, the primacy agency. In most states and territories, the PWS submits water quality results from a certified lab to the primacy agency. The primacy agency and federal government may never know of an MCL occurrence in these situations since the PWS may opt to resample or incur a monitoring violation rather than receive an MCL violation. New Hampshire PWSs do not have this option. The intent of this law was to protect consumer health from risks that could be caused by systems manipulating the submission of sampling data.

The majority of PWS violations that occurred in New Hampshire in 2007 were due to failure to monitor. While these violations are of concern, they are generally considered secondary to violations that more directly affect public health, such as violations occurring from exceeding a maximum contamination level. We believe that our modifications to the enforcement strategy will decrease the overall number of violations over the next few years as our enforcement presence is better recognized. In addition, the availability of sampling schedules and analysis forms over the internet is expected to reduce monitoring violations.

The majority of violations occurred at PWSs serving populations less than 500. Most of the systems with monitoring violations have previously monitored, and have not detected any regulated contaminants at levels affecting public health. It is important to note that in addition to MCL occurrences, New Hampshire tends to report a higher number of M/R violations than other states. We believe that this is due to our highly automated tracking system that treats all systems equally, regardless of size or classification. Both M/R and MCL violations are tracked diligently. All monitoring schedules are in the database and monthly reports are generated specifying which samples are outstanding. All outstanding violations are pursued. A review of the previous sections of this document demonstrates that the small systems incur a larger number of violations.

When a system addresses its violations, it returns to compliance (RTC). The time it takes a New Hampshire water system to achieve RTC status varies depending upon the nature of the underlying violation. For example, a PWS receiving a treatment technique (TT) violation under the Surface Water Treatment Rule (SWTR) may achieve RTC status in a month, but it may take a seasonal PWS up to a year to achieve RTC status following a Total Coliform Rule Monitoring/Reporting (TCR M/R) violation.

REPORT AVAILABILITY AND CONTACT INFORMATION

The New Hampshire 2007 Annual Compliance Report may be obtained by contacting the New Hampshire Department of Environmental Services, Water Division, Drinking Water and Groundwater Bureau, 29 Hazen Drive, PO Box 95, Concord, NH 03302-0095. A summary report

2007 NEW HAMPSHIRE ANNUAL COMPLIANCE REPORT

will be made available at the DES website <http://www.des.nh.gov/dwgb> as well as a compilation of violations by violation type (ALL or MCL/TT), town, and/or calendar year. For further information concerning this report, please contact Terri Sabbia at (603) 271-2923 or by email to Terri.Sabbia@oit.nh.gov.

Definitions for Violations Table

The following definitions apply to the Summary of Violations table.

Filtered Systems: Water systems that have installed filtration treatment [40 CFR 141, Subpart H].

Inorganic Contaminants: Non-carbon-based compounds such as metals, nitrates, and asbestos. These contaminants are naturally-occurring in some water, but can get into water through farming, chemical manufacturing, and other human activities. EPA has established MCLs for 15 inorganic contaminants [40 CFR 141.62].

Lead and Copper Rule: This rule established national limits on lead and copper in drinking water [40 CFR 141.80-91]. Lead and copper corrosion pose various health risks when ingested at any level, and can enter drinking water from household pipes and plumbing fixtures. States report violations of the Lead and Copper Rule in the following six categories:

Initial lead and copper tap M/R: SDWIS Violation Code 51 indicates that a system did not meet initial lead and copper testing requirements, or failed to report the results of those tests to the State.

Follow-up or routine lead and copper tap M/R: SDWIS Violation Code 52 indicates that a system did not meet follow-up or routine lead and copper tap testing requirements, or failed to report the results.

Treatment installation: SDWIS Violation Codes 58 AND 62 indicate a failure to install optimal corrosion control treatment system (58) or source water treatment system (62) which would reduce lead and copper levels in water at the tap. [One number is to be reported for the sum of violations in these two categories].

Public education: SDWIS Violation Code 65 shows that a system did not provide required public education about reducing or avoiding lead intake from water.

Maximum Contaminant Level (MCL): The highest amount of a contaminant that EPA allows in drinking water. MCLs ensure that drinking water does not pose either a short-term or long-term health risk. MCLs are defined in milligrams per liter (parts per million) unless otherwise specified.

Monitoring: EPA specifies which water testing methods the water systems must use, and sets schedules for the frequency of testing. A water system that does not follow EPA's schedule or methodology is in violation [40 CFR 141].

States must report monitoring violations that are significant as determined by the EPA Administrator and in consultation with the States. For purposes of this report, significant monitoring violations are major violations and they occur when no samples are taken or no results are reported during a compliance period. A major monitoring violation for the surface water treatment rule occurs when at least 90% of the required samples are not taken or results are not reported during the compliance period.

Organic Contaminants: Carbon-based compounds, such as industrial solvents and pesticides. These contaminants generally get into water through runoff from cropland or discharge from factories. EPA has set legal limits on 54 organic contaminants that are to be reported [40 CFR 141.61].

Radionuclides: Radioactive particles which can occur naturally in water or result from human activity. EPA has set legal limits on four types of radionuclides: radium-226, radium-228, gross alpha, and beta particle/photon radioactivity [40 CFR 141]. Violations for these contaminants are to be reported using the following three categories:

Gross alpha: SDWIS Contaminant Code 4000 for alpha radiation above MCL of 15 picocuries/liter. Gross alpha includes radium-226 but excludes radon and uranium.

Combined radium-226 and radium-228: SDWIS Contaminant Code 4010 for combined radiation from these two isotopes above MCL of 5 pCi/L.

Gross beta: SDWIS Contaminant Code 4101 for beta particle and photon radioactivity from man-made radionuclides above 4 millirem/year.

Reporting Interval: The reporting interval for violations to be included in the first PWS Annual Compliance Report, which was to be submitted to EPA by January 1, 1998, was from July 1, 1996 through June 30, 1997. This interval will change for future annual reports. See guidance language for these intervals.

SDWIS Code: Specific numeric codes from the Safe Drinking Water Information System (SDWIS) have been assigned to each violation type included in this report. The violations to be reported include exceeding contaminant MCLs, failure to comply with treatment requirements, and failure to meet monitoring and reporting requirements. Four-digit SDWIS Contaminant Codes have also been included in the chart for specific MCL contaminants.

Surface Water Treatment Rule: The Surface Water Treatment Rule establishes criteria under which water systems supplied by surface water sources, or ground water sources under the direct influence of surface water, must filter and disinfect their water [40 CFR 141, Subpart H]. Violations of the “Surface Water Treatment Rule” are to be reported for the following four categories:

Monitoring, routine/repeat (for filtered systems): SDWIS Violation Code 36 indicates a system’s failure to carry out required tests, or to report the results of those tests.

Treatment techniques (for filtered systems): SDWIS Violation Code 41 shows a system’s failure to properly treat its water.

Monitoring, routine/repeat (for unfiltered systems): SDWIS Violation Code 31 indicates a system’s failure to carry out required water tests, or to report the results of those tests.

Failure to filter (for unfiltered systems): SDWIS Violation Code 42 shows a system’s failure to properly treat its water. Data for this violation code will be supplied to the States by EPA.

Total Coliform Rule (TCR): The Total Coliform Rule establishes regulations for microbiological contaminants in drinking water. These contaminants can cause short-term health problems. If no samples are collected during the onemonth compliance period, a significant monitoring violation occurs. States are to report four categories of violations:

Acute MCL violation: SDWIS Violation Code 21 indicates that the system found fecal coliform or E. coli, potentially harmful bacteria, in its water, thereby violating the rule.

Non-acute MCL violation: SDWIS Violation Code 22 indicates that the system found total coliform in samples of its water at a frequency or at a level that violates the rule. For systems collecting fewer than 40 samples per month, more than one positive sample for total coliform is a violation. For systems collecting 40 or more samples per month, more than 5% of the samples positive for total coliform is a violation.

Major routine and follow-up monitoring: SDWIS Violation Codes 23 and 25 show that a system did not perform any monitoring. [One number is to be reported for the sum of violations in these two categories.]

Sanitary Survey: SDWIS Violation Code 28 indicates a major monitoring violation if a system fails to collect 5 routine monthly samples if sanitary survey is not performed.

Treatment Techniques: A water disinfection process that EPA requires instead of an MCL for contaminants that laboratories cannot adequately measure. Failure to meet other operational and system requirements under the Surface Water Treatment and the Lead and Copper Rules have also been included in this category of violation for purposes of this report.

Unfiltered Systems: Water systems that do not need to filter their water before disinfecting it because the source is very clean [40 CFR, Subpart H].

Violation: A failure to meet any state or federal drinking water regulation.
